Coursework

Relevant Coursework:	Programming Fundamentals 1 & 2, Data Structures & Algorithms, UX Design, Software Engineering, Computer Architecture, Programming Language Concepts, Operating Systems
-----------------------------	--

Projects

InterVids

- Assisted in the creation of an eLearning platform with a focus on video sharing and chatting between teachers and students within courses
- Contributed in the designing of the frontend for each of the web views
- Implemented authentication for users, required database service, and necessary CRUD operations for the various models
- Used the Agile Methodology in implementation
- Technologies used: Angular, Tailwind CSS, Firebase Authentication, Firestore Database

UX Client Project

- Worked with the software company UKG to prototype a redesign of their in house environment management application
- Conducted user research through a focus group of users, and based prototype design off researched findings
- Created a fully clickable interactive prototype displaying our findings using Figma

Portfolio Website

- Designed a fully functioning, static, responsive portfolio website
- Deployed website to GitHub pages, and used JSON files for static data
- Technologies used: Angular, Tailwind CSS
